TECHNOLOGY FOR TEACHING AND LEARNING

POST-PRESENTATION LEARNING ACTIVITY SHEET

Name: ROMNICK P. RAMACULA Section: BEEd-2C Date: _____

Presentation dates: _____ Instructor: Kerstan Isaac Requiza

Purpose and directions

Complete this sheet after the series of student-led topic presentations. Listen attentively, record accurate ideas from each presentation, and answer the synthesis and application questions in your own words. Use specific examples from the topics discussed. If additional space is needed, attach a clearly labeled sheet.

A. Presentation learning log (20 points)

Record the key learning from each presentation. Add rows or use an additional sheet if there are more than four topics.

Topic / presenter	Two important ideas or concepts	One classroom use or example
1. Electronic Portfolios and Assessment of Learning REPORTER: PAALISBO	1. E-Portfolios help students keep their work and see their progress. 2. They help teachers understand what students have learned.	As a future teacher, I can ask my students to save their activities and projects in a digital folder.
2. The Role of ICT in Assessment in Learning REPORTER: NERI	1.ICT makes assessment easier and faster. 2.It helps teachers check students understanding and give feedback.	I can use Google Forms to give quizzes and check my students answers.
3.Criteria for Selecting Assessment Tools REPORTER: NERI	1.Assessment Tools should match the lesson objectives. 2. They should be fair, clear, and easy for students to use.	I will choose a simple quiz or activity that matches what I taught in class.
4. Key Advantages of Online Examinations REPORTER: MORATA	1. Online exams save time and give faster results. 2. Students can answer using their phones or computers.	I can use an online quiz to check what my students learned after our discussion.
21ST Century Trends in Assessment	1.Technology helps teachers check students learning in an easier and faster way.	As a future teacher, I can use Google Forms for quizzes and give students simple projects where they can show their creativity and understanding of

REPORTER: NEMENO	2.Students are given opportunities to show what they have learned through projects , activities, and real-life tasks.	the lesson.
Criteria in Choosing Appropriate Assessment Tools REPORTER: MONTERO	1.Alignment with Learning Objectives-Teachers should choose assessment tools that match what students are expected to learn. 2.Fairnes and Appropriateness-Assessment tools should be fair, easy to understand, and suitable for the students abilities and needs.	As a future teacher, I will use simple quizzes, activities, or group projects that match my lesson objectives. This will help me understand what my students have learned and where they need improvement.

B. Synthesis and critical thinking (30 points)

1. Which two ideas from different presentations are connected? Explain their relationship and why it matters for teaching and learning.

The two connected ideas are the role of ICT in assessment and electronic portfolios. Both use technology to help teachers understand students' learning and progress. ICT makes assessment easier, while electronic portfolios show students' improvement through their activities and projects. As a future teacher, I believe these are important because they help me understand my students' strengths and the areas where they need more support. They also help me become a better teacher by guiding me on how to improve my teaching.

2. Identify one claim, tool, or strategy discussed that needs careful evaluation before a teacher uses it. What criteria would you use to assess its suitability?

One tool that needs careful evaluation is online assessment or quizzes. Before using this tool, I would check if it matches the learning objectives, is easy for students to use, gives fair and accurate results, and is accessible to everyone. As a future teacher, I want to make sure that the tool helps students learn and measures what they truly understand.

3. What common challenge in using technology for teaching emerged from the presentations? Propose a realistic response.

One common challenge is poor internet connection and lack of gadgets. To solve this, teachers should prepare printed materials and offline activities so students can continue learning even without technology.

C. Apply the learning: classroom design challenge (30 points)

Imagine you are teaching a 40-minute lesson to a class with varied learning needs and uneven access to devices or internet. Design ONE technology-supported activity based on at least two ideas from the presentations.

Grade level / subject / lesson topic:

Grade Level: Grade 4

Lesson Topic: Parts of a Plant and Their Functions

Learning objective (what learners should be able to do):

Learning Objectives: At the end of the lesson, learners should be able to:

1.Identify the main parts of a plant.

2.Explain the function of each plant part.

3 Work together in groups to label the parts of a plant using digital or printed pictures.

Selected technology or digital/non-digital alternative and reason for choosing it:

Selected Technology: Laptop and projector to show a short video about the parts of a plant.

Non-Digital Alternative: Printed pictures and worksheets.

Reason for Choosing: These materials help learners understand the lesson through pictures and videos. Printed materials are also available for students who do not have gadgets or internet access, so everyone can participate.

Activity procedure

Before the Activity (5 minutes): The teacher prepares a short video, laptop, projector, printed pictures, and worksheets about the parts of a plant.

During the Activity (25 minutes):

The teacher shows the video and explains the parts of a plant. Then, learners work in groups to identify and label the plant parts using digital or printed pictures. They also discuss the functions of each part.

After the Activity (10 minutes): Each group presents their answers to the class. The teacher checks their understanding and gives a short quiz to assess what they learned before, during, and after):

How the activity supports accessibility, inclusion, and responsible technology use:

The activity supports accessibility and inclusion by providing videos, pictures, and printed worksheets so all learners can participate, even without gadgets or internet. It respects different learning needs and encourages teamwork. It also promotes responsible technology use by using devices properly, respecting others, and focusing on learning.

How you will assess whether learners achieved the objective:

I will assess the learners through their group activity, presentation, and a short quiz. They should correctly identify the parts of a plant, explain their functions, and work together with their classmates. This will help me know if they achieved the learning objectives.

D. Individual reflection and accountability (20 points)

1. What is the most important insight you gained from the presentations, and how has it changed or strengthened your view of teaching with technology?

My biggest insight is that technology can make learning easier, more interesting, and more interactive. However, teachers should also consider the needs of all learners and provide alternatives for those without gadgets or internet access.

2. What question remains unanswered? State how you would investigate it using a credible source.

My question is: How can teachers use technology effectively when some students have no internet access? I would investigate this by reading DepEd guidelines, educational research, and trusted websites about inclusive teaching strategies.

3. Describe one concrete way you contributed to a productive learning environment while the instructor was absent.

I helped maintain a productive learning environment by cooperating with my classmates, staying focused on our tasks, and encouraging everyone to work together even when the instructor was absent.

Scoring guide (100 points)

Component	Points
A. Complete, accurate presentation log	20
B. Connections, evaluation, and reasoned response	30
C. Feasible, inclusive, aligned classroom activity	30
D. Thoughtful reflection and accountability	20
TOTAL	100

Student signature: _____ Instructor score: _____ / 100
